The test results in this report apply only to the specimens tested. The tests conform to the respective test methods except for the report requirements. The report includes summary data but a full complement of data is available upon request. This report shall not be reproduced, except in full, without written approval of R & D Services, Inc. This report must not be used by the Client to claim product endorsement by R & D Services, Inc., NVLAP, NIST or any other agency of the U.S. Government.

## Total Hemispherical Emittance Test Report

Test Number: RD132657HE

Date of Test: October 14, 2013

Specimen Number: 1364131014-1,3

Date of Manufacture: Unknown

Description of Test Specimens: "Sun Shield" White Coating Applied to Metal Panels.

Test Method: ASTM C 1371-04a(2010)e1, "Test Method for Determination of Emittance of Materials near Room Temperature Using Portable Emisometers".

Report Prepared For: Superior Products International II, Inc. /Mr. Craig Smith

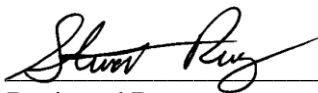

### Procedure

This report presents the results of the test specimen identified above using a Model AE emissometer manufactured by Devices and Services Company of Dallas, Texas. The emissometer is powered to provide warm-up prior to use. A warm-up time of one hour in a conditioned laboratory has been found to be acceptable. Calibration at high and low emittance is performed after the warm-up period using calibration disks supplied by Devices and Services Company. Test specimens are placed in good contact with the thermal sink that is part of the apparatus. A drop of distilled water between the test specimen and a thermal sink was used to improve the thermal contact. The measurement head of the emissometer is placed on the test specimen and held in place at least 60 seconds for each measurement. The emissometer was calibrated prior to use and calibration was verified at the end of testing. The average emittance reported below is based on three measurements.

<u>R&amp;D Identification</u>	<u>Specimen Description</u>	<u>IR Emittance</u>	<u>Standard Deviation</u>
1364131014-1,3	Sun Shield	0.892	0.002

### Uncertainty

The 95 % reproducibility as stated in Section 10 of ASTM C1371-04a is 0.019 units.

## **Solar Reflectance Test Report**

Test Number: RD132656SR

Date of Test: October 14, 2013

Specimen Number: 1364131014-1,3

Date of Manufacture: Unknown

Description of Test Specimens: “Sun Shield” White Coating Applied to Metal Panels.

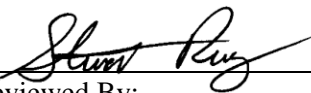

Test Method: ASTM C 1549-09, “Test Method for Determination of Solar Reflectance Near Ambient Temperature Using a Portable Solar Reflectometer.”

Report Prepared For: Superior Products International II, Inc. /Mr. Craig Smith

### Procedure

The measurement of solar reflectance in accordance with ASTM C 1549-09 was completed using a solar reflectometer built by Devices and Services Company. The reflectometer was calibrated using standards with reflectance 0.0 and reflectance 0.824 prior to use. The solar reflectance measurements were made in a conditioned laboratory space. The solar reflectance was measured at air mass 1.5.

<u>R&amp;D Identification</u>	<u>Specimen Description</u>	<u>Average Reflectance</u>	<u>Standard Deviation</u>
1364131014-1,3	Sun Shield	0.827	0.002
